Objective

Innovative Machine Learning Engineer and Product Designer with expertise in LLMs, computer vision, and human-centered design. Passionate about building intelligent, user-focused products that bridge the gap between cutting-edge AI and real-world usability.

Education

Lovely Professional University

Bachelor of Technology in Computer Science and Engineering; CGPA: 7.35

Punjab, India

May' 2027

Sri Saraswathi Educational Institutions

Intermediate; Percentage: 80%

Andhra Pradesh, India

May' 2023

Bhashyam High School

10th Grade; Percentage: 100%

Andhra Pradesh, India

Apr' 2020

Technical Skills

Programming & Core: Python, Java, SQL, Data Structures & Algorithms, Git

Machine Learning & Deep Learning: Supervised Learning, Unsupervised Learning, Classification, Regression, Clustering, Feature Engineering, Model Optimization, Hyperparameter Tuning, Neural Networks (ANN, CNN, RNN)

Generative AI & Large Language Models: LangChain, OpenAI API, HuggingFace Transformers, BERT, Sentence Transformers, Retrieval-Augmented Generation (RAG), Vector Search, Prompt Engineering

Computer Vision: OpenCV, DeepFace, dlib, Image Processing, Face Recognition

ML Frameworks & Libraries: Scikit-learn, TensorFlow, PyTorch, Pandas, NumPy, Matplotlib, spaCy

MLOps & Experimentation: MLflow, Model Evaluation, Experiment Tracking, Model Versioning

Vector Databases & Semantic Search: FAISS, Embedding Models, Semantic Search

Deployment & Cloud: Docker, Flask, Streamlit, REST APIs, AWS, Google Cloud, SQLite

Projects

Project Title: AI Chatbot with RAG (LLM Project)

Mar 2026 – Apr 2026

Description: Built a context-aware AI chatbot using Retrieval-Augmented Generation (RAG) that answers queries from custom documents with high factual accuracy.

Technologies Used: Python, LangChain, OpenAI API, FAISS, Streamlit, PyPDF2

Impact/Achievements: Achieved 89% answer relevance score on custom knowledge base; reduced hallucination rate by 40% compared to vanilla LLM baseline using chunk-based retrieval.

Demo/Code Link: <https://github.com/dhanush/ai-chatbot-rag>

Project Title: Attendance System with Face Recognition

Jan 2026 – Mar 2026

Description: Developed a real-time automated attendance system using facial recognition that detects, identifies, and logs student attendance from live webcam feed.

Technologies Used: Python, OpenCV, DeepFace, dlib, Flask, SQLite

Impact/Achievements: Achieved 96.3% recognition accuracy across 50+ faces under varied lighting; reduced manual attendance time by 80% compared to traditional methods.

Demo/Code Link: <https://github.com/dhanush/attendance-face-recognition>

Project Title: Resume Screener

Aug 2025 – Sep 2025

Description: Built an NLP-based resume screening tool that automatically ranks and shortlists candidates by matching resume content against job descriptions using semantic similarity.

Technologies Used: Python, spaCy, Scikit-learn, BERT, Sentence Transformers, Streamlit

Impact/Achievements: Achieved 91% matching accuracy on a dataset of 500+ resumes; reduced screening time from hours to under 30 seconds per job posting.

Demo/Code Link: <https://github.com/dhanush/resume-screener>

Certifications

- Machine Learning Explainability – Kaggle (In Progress)
- Game AI & Reinforcement Learning – Kaggle (In Progress)
- ChatGPT-4 Prompt Engineering: ChatGPT, Generative AI & LLM – Infosys Springboard (2025)
- Master Generative AI & Generative AI Tools – Udemy (2025)

Achievements

- Hackathon Recognition: Secured 2nd place in the University Coding Hackathon (2024) by developing an AI-based solution.
- Algorithmic Problem Solving: Solved 200+ LeetCode problems, strengthening expertise in Data Structures & Algorithms.
